

KAGE Fitness Studio ERP

UAT Summary & Validation Tracker

Independent Business Analyst Portfolio Artefact

Portfolio boundary note: This UAT summary is a simulated validation artefact for a BA portfolio case study. All test data, tester names, outcomes, and defects are fictional and created solely to demonstrate BA validation thinking.

UAT Snapshot

Project context

KAGE Fitness Studio ERP is an independent BA portfolio case study inspired by real-world fitness studio operations. The UAT cycle was simulated to validate 7 ERP modules across 26 test cases covering Membership, PT Sessions, Finance, Freelancer, Renewals, Equipment, and Reports. The initial pass rate of 77% reflects a realistic first-cycle outcome where critical defects were actioned before sign-off and minor gaps were deferred to future iterations.

Document structure

Page 1 — Cover & UAT Snapshot | Page 2 — UAT Strategy | Pages 3–4 — Test Case Register (26 cases) | Page 5 — Defect Summary | Page 6 — UAT Outcome & Sign-off Readiness

UAT Strategy

APPROACH

This UAT was conducted as a structured simulated walkthrough. Each test case was mapped to a functional requirement or business rule and executed against acceptance criteria defined during the requirements phase. The goal was to confirm that the system design supports real operations and that all MVP-scope rules are testable.

TEST BASIS

- Functional requirements (FR-01 to FR-10) defined in the requirements document.
- Business rules (BR-01 to BR-10) including gate flag, cancellation, and commission logic.
- ERP module flows: Membership, PT Sessions, Finance, Freelancer, Renewals, Equipment, Reports.
- Data model assumptions: Member Type separation, FreelancerBilling formula, Payment status flow.
- Prototype behaviour and wireframe acceptance criteria.

EXECUTION STYLE

Simulated UAT walkthrough — not a formal client-signed UAT. Test cases were walked through step by step against design specifications and business rules. Results were logged manually and defects were categorised by severity and business impact.

DEFECT HANDLING

All failed test cases were logged with: Defect ID, area, issue description, severity (Major / Minor), business impact note, and action taken. Major defects required a fix before sign-off. Minor defects were either fixed or formally deferred with documentation.

Entry criteria	Exit criteria
• All 7 ERP modules have design specifications. • Functional requirements and business rules are finalised. • Test cases are written and reviewed. • Test data (member records, trainer slots, billing scenarios) is prepared. • Prototype or system flow is available for walkthrough.	• All 26 test cases are executed (Pass / Fail / Defer). • All Major defects are resolved or formally accepted. • Minor defects are documented with agreed action. • UAT summary is signed off by BA / stakeholder. • Deferred items are logged as backlog for future iteration.

STATUS DEFINITIONS

Status	Definition
PASSED	Test case met all acceptance criteria. No further action.
FAILED	Test case did not meet criteria. Defect raised and logged.

PEND	Test not executed yet, or blocked due to missing dependency.
DEFER	Descoped for MVP. To be reviewed in a future iteration.

Test Case Register — Part 1

Membership · PT Sessions · Finance (TC-FN-001 to TC-FN-004)

Test ID	Module	Scenario	Expected result	Status
TC-MB-001	Membership	Register a new direct member with full details	Member record created, MemberType = Direct Member, status Active	PASS
TC-MB-002	Membership	Attempt registration with duplicate phone or email	System blocks duplicate and shows inline validation message	PASS
TC-MB-003	Membership	Assign a membership plan during registration	Plan linked to member record; fee, duration, and expiry date populated	PASS
TC-MB-004	Membership	Check access status of an expired membership	ERP status flagged; front desk action required	PASS
TC-PT-001	PT Sessions	Allocate PT client to an available trainer	Session record created with trainer, date, time, and package reference	PASS
TC-PT-002	PT Sessions	Attempt to book a conflicting trainer slot (non-group)	System prevents double booking; shows existing slot conflict message	PASS
TC-PT-003	PT Sessions	Mark session complete and reduce package balance	CompletedSessions +1, RemainingSessions -1, PackageStatus updated	PASS
TC-PT-004	PT Sessions	Cancel a PT session before it starts	Session status = Cancelled; package balance unchanged; reason and timestamp logged	PASS
TC-PT-005	PT Sessions	View estimated trainer commission after billing cycle	Trainer sees session count and estimated commission after cycle close; final approval by Admin	PASS
TC-FN-001	Finance	Record a membership payment (Cash / UPI / Card)	Payment record saved; PaymentStatus = Paid; invoice number generated	PASS
TC-FN-002	Finance	Submit payment form with blank amount field	System blocks submission; validation error shown on amount field	FAIL
TC-FN-003	Finance	Generate invoice after payment entry is saved	Invoice created with unique number, member details, amount, and date	PASS
TC-FN-004	Finance	Update invoice sharing status after sending to member	InvoiceSharedStatus updated to Sent; timestamp recorded	PASS

Test Case Register — Part 2

Finance (TC-FN-005) · Freelancer · Renewals · Equipment · Reports

Test ID	Module	Scenario	Expected result	Status
TC-FN-005	Finance	Record a partial payment against a membership fee	PaymentStatus = Partial; outstanding balance noted; second payment linkable	PASS
TC-FR-001	Freelancer	Register a freelancer with MemberType = Freelancer	Freelancer record linked to Member record; MemberType confirmed	PASS
TC-FR-002	Freelancer	Link a freelancer client to the correct freelancer	FreelancerClient record created; MemberType = Freelancer Client; linked to Freelancer	PASS
TC-FR-003	Freelancer	Calculate monthly payable for a freelancer with 3 active clients	Monthly payable = Own fee + (3 x per-client access fee); figure matches formula	PASS
TC-FR-004	Freelancer	Apply gate flag when monthly payment is overdue by 5+ working days	GateFlagStatus = Active; ERP status flagged; front desk action required	PASS
TC-RN-001	Renewals	Member enters the 7-day pre-expiry renewal window	Renewal alert shown on member profile; follow-up queue updated	PASS
TC-RN-002	Renewals	Member's membership passes expiry date without renewal	Membership status = Expired; access restricted	PASS
TC-RN-003	Renewals	Renewal remains unpaid for 3+ days after expiry	System escalates follow-up status; Admin notified in queue	PASS
TC-RN-004	Renewals	Automated reminder is triggered via notification channel	Reminder state updated in system; automated WhatsApp/SMS channel not in MVP	FAIL
TC-EQ-001	Equipment	Log a repair event with cost, vendor, and notes	MaintenanceLog record created; linked to Equipment record	PASS
TC-EQ-002	Equipment	3rd repair logged for same equipment in 6-month window	ReplacementReviewFlag = True; system flags for review; owner makes final decision	PASS
TC-RP-001	Reports	Open the owner revenue dashboard	Revenue summary displayed: membership, PT, freelancer, maintenance cost, net revenue	PASS
TC-RP-002	Reports	Export monthly report with an empty filter selection	System should block export with empty filter; currently allows — defect raised	FAIL

Defect Summary

FAILED TEST CASES — DEFECTS RAISED

ID	Area	Issue	Severity	Action / Status
DF-01	Finance	Blank amount field allowed payment submit in one flow. No validation error triggered.	Major	Fix field validation on Payment entry form. Block submit if amount is null or zero. Required before sign-off.
DF-02	Reports	Monthly export screen allowed export with no filter selected. Results were unfiltered.	Minor	Add required filter validation on export screen. Block export until at least one filter is applied.
DF-03	Renewals	Automated notification channel (WhatsApp/SMS) is not integrated. Reminder state can only be updated manually.	Minor	Deferred. Notification channel integration is post-MVP. Manual follow-up via front desk is the interim process.
DF-04	Commission	Estimated commission visibility requires an Admin review trigger before payout cycle closure. Trigger logic not confirmed.	Major	Keep as Pending Review. Admin must manually trigger payout cycle closure. Commission view for trainer activates after trigger.

PENDING ITEMS — NOT EXECUTED OR DEFERRED

ID	Area	Issue	Severity	Action / Status
PN-01	Renewals	WhatsApp/SMS automated reminder execution. Vendor integration not in scope for MVP.	Pending	Deferred to post-MVP. Log as backlog item. Manual reminder is the accepted workaround.
PN-02	Reports	Full payout statement export for trainer commission not included in MVP report scope.	Pending	Deferred to post-MVP. Admin can view commission data on screen; export is a future enhancement.

Defect resolution summary

DF-01 (Finance validation) and DF-04 (Commission trigger) are Major severity and require resolution or formal acceptance before final sign-off. DF-02 and DF-03 are Minor severity and have been formally deferred with documented rationale. PN-01 and PN-02 are outside MVP scope and logged as backlog items for the next iteration.

UAT Outcome & Sign-off Readiness

20 / 26

Test cases passed

4

Defects raised

2

Deferred to v2

77%

First-cycle pass

SIGN-OFF DECISION

Proceed to MVP sign-off — with conditions

Core member registration, PT session management, freelancer billing, payment recording, and equipment tracking logic is validated and strong enough to proceed. Automated reminders (PN-01) and trainer payout export (PN-02) are better treated as planned enhancements rather than blockers. DF-01 and DF-04 must be confirmed resolved or formally accepted by Admin before final sign-off is granted.

WHAT THIS UAT PROVES

Requirements are testable

All 26 test cases map directly to a functional requirement or business rule. No orphan test cases.

Business logic is defensible

Freelancer billing formula, PT cancellation rule, gate flag threshold, and commission visibility rules are all validated through specific test scenarios.

Defects are tracked with actions

Every failed case has a defect ID, severity, root cause note, and a clear action — either a fix instruction or a formal deferral decision.

MVP scope is controlled

Two items are intentionally deferred. The deferral rationale is documented and does not impact core operational readiness.

UAT is not just a checklist

The pass rate of 77% reflects a realistic first-cycle outcome. A 100% pass rate with no defects would be less credible for an ERP system of this scope.

Next steps after UAT

1. Resolve DF-01 (payment validation) and DF-04 (commission trigger) with development team. 2. Obtain formal sign-off on deferral of PN-01 and PN-02 from product owner. 3. Update requirements register with any scope changes identified during UAT. 4. Archive test case register and defect log as part of the final BA artefact package.
